Products and Services

Hunting provides products and services to the world’s leading national, international energy companies and oil service companies enabling the extraction of oil and gas. Manufacturing and sales locations are located in the key energy producing regions of the world.

Proprietary Technology

Hunting owns and develops proprietary patented products with a range of applications below the wellhead including mud motors, premium connections, well perforating, logging and intervention tools.

Geographic Footprint

It strategic location around the world Hunting owns and operates plants, properties and equipment enabling people to deliver to global customers with local services and products.

Large OD Threading

Crossbars

Pup Joints

OEM Threading

Coupling Manufacture

Health, Safety, Environment and Quality Assurance

Hunting is committed to working safely in an environmentally responsible manner. These principles are fully integrated within our Quality Management System that defines the company’s global operations.

Quality Assurance

It is essential that products and services provided by Hunting are designed and manufactured to conform to the agreed API, proprietary licensors, or other specifications of the customer meeting their needs and expectations the first time, every time.

Health, Safety and the Environment

Hunting is committed to achieving and maintaining the highest standards of safety for its employees, customers, suppliers and the public. Hunting operates a corporate Quality Management System covering all worldwide locations.

Further Information

Hunting provides products and services to the world’s leading national, international energy companies and oil service companies enabling the extraction of oil and gas. Manufacturing and sales locations are located in the key energy producing regions of the world.
As one of the world’s leading suppliers of well construction and well completion equipment, Hunting provides a global service throughout the tubular cycle, combining the provision of tubulars, threaded accessories and connection threading. These items are critical to every stage of the exploration and production process.

Hunting is at the forefront of new tubular technology, with the design and development of the Hunting Clear-Run™ Advanced Tubular System for dope-free connections, providing enhanced environmental protection and downhole performance.

Hunting has established a global network of threading facilities capable of threading full length and accessory components from 1.9” to 20” diameter. The full range of API, proprietary and licensed threadforms can be machined onto manufactured and free-issue components.

Organised in cellular manufacture, Hunting has separate threading lines for range 3 casing, tubing sizes, large diameter (up to 20”), dedicated pup joint and coupling manufacturing lines. All are fully automated with separate handling systems and gauge stations, ensuring quick deliveries and promoting safe operations.

This allows high volume production of multiple orders simultaneously; for example threading both the tubing string and the associated accessories at the same time.

Hunting has over 70 million US Dollars of tubular inventory available for use, including API, 13% Chrome, Hyperchrome and Duplex grades and access to AISI 4145, 4140 L80, 4130 18/22RC and 420 13% Chrome L80 grades for bespoke accessory manufacture.

Hunting is ideally positioned to manufacture for export, with experienced staff completing customs clearance requirements. An export crating service is available to prevent transit damage and with threading locations positioned close to major railheads and waterways, logistics costs are minimised.

Hunting recognises the contribution that experienced personnel make to delivering customer satisfaction and competitive advantage. In order to support human resource goals and demonstrate competency, Hunting has commissioned a bespoke in-house training system and appointed a full time training co-ordinator.

Managing your Downhole Risk

Hunting helps customers reduce the risk of potential likelihood of failure and leakage from threaded components by:

- Developing a design system for common accessory specifications
- Using the latest Computer Numerical Control (CNC) lathe technology and Direct Numerical Control (DNC) machine feedback systems to ensure threading quality and efficiency
- Implementing flexible working structures such as pup joint and coupling manufacturing areas to allow simultaneous threading operations
- Ensuring procedures and work instructions closely reflect the activities undertaken
- Technical staff, sales and manufacturing personnel available on 24 hour call out.

Our Product and Service Offering includes

- Pup Joints
- Pup Joint Sets
- Perforated Pup Joints
- Couplings
- Connector – Double Pin Subs
- Connector Crossovers
- Blast Joints
- Flow Couplings
- Flow Tubes
- Landing Nipples
- Test Plugs
- Test Caps
- Bull Plugs
- Single Joint Lifting Plugs
- Multiple Joint Lifting Plugs
- Fabricated Swedges
- Re-Entry Guide
- Half And Full Mule Shoe
- Tubing Hangers
- Float Equipment
- Gas Mandrels
